Procedure

Combine phase A and C ingredients separately at 85–90 °C. Add phase B to A. Stir with a dissolver for 5 minutes and homogenize for 30 seconds. Add phase C and homogenize again for 30 seconds. Cool to 75 °C and fill into molds.

If you prefer to use pure pigment split the dispersion to 50 % pure pigment and 50 % castor oil. Add castor oil to phase A. Mix pigments with a part of phase A and grind by using a mill.

Specification values

Appearance: rosy stick

Stability: passed three months at RT, 40 °C, and 50 °C
